

Family Fun!

Ideas to support learning, play and well-being.

Writing a comic book

Your child will need a comic strip template, they can download one or design their own. Encourage your child to talk about their story first. Then they can draw pictures and add speech bubbles. Add colour and give them the opportunity to share their stories with family and friends.

Sweet Fractions

Sweets are probably the tastiest way to learn fractions! Pour out some smarties, skittles or equally colourful treats on a plate. You can also do this with a family size bar of chocolate broken into squares. Next ask your child questions about fractions encouraging them to move sweets as they answer to help them visualise proportions in action. What proportion of the sweets are blue? If I eat 3 sweets, what fraction of the sweets do I now have? Can you divide the sweets into thirds?

Sewing Using Disposable Plates

All you need is some colourful embroidery thread, some disposable plates which are easy to poke through and stay nice and stiff while your child learns to sew and some tapestry needles as they have a big eye and dull point making them safer for your child to use. Make a design by poking through holes and let your child enjoy this fun activity.

Fruit and Cheese Kebabs

These kebabs are a great snack for kids and a nice way to get your child involved and interested in eating healthy foods. A good combination of carbohydrates and proteins leaving your child full and satisfied for longer. You will need fruit of your choice, wooden skewers and light string cheese sticks cut in to pieces.
